

ENVIRUS

SHIELDING YOU SHIELDING THE ENVIRONMENT

Envirus is a rapidly evolving brand dedicated to providing personal-protective-equipment (PPE) that is more comfortable, provides protection relative to risk and minimises environmental impact.

It's critical to understand that different applications require different levels of protection. We use the following factors to evaluate the best option for you.

INTRODUCING THE EVERYDAY MASK

As the name implies the every day mask is designed to be worn for long periods every day. The flexible fit and design make it very comfortable to wear.

COLOURS

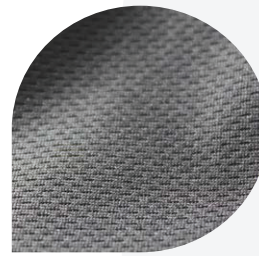

PROTECTION:

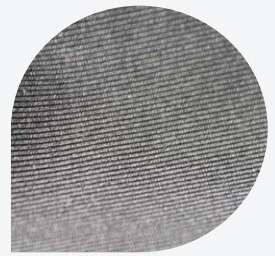

Dual layer design

- Layer 1: The outer fabric is an easy-breathe fabric with an anti microbial/anti bacterial treatment.
- Layer 2 : The inner fabric finer stitched fabric allowing for better filtration and is permanently anti microbial thanks to the inherent highly flexible liquid titanium woven into the fabric

If worn correctly using both elastic fasteners the mask will provide a good seal around the face and with the added feature of a flexible nose clamp allowing the mask to mould to any face type and provide a good fit and prevent leakage.

LAYER 1

LAYER 2

ENVIRONMENTAL

In the last 4 months there has been an estimated 70% increase in discarded surgical and medical masks washing up on beaches across the world and also in built up urban areas plus land fill. The Core ingredient of these masks is Poly Propylene and it does not break down naturally in the environment.

At the core of the Envirus Everyday is its ability to be laundered making it a multi use mask that can save our environment and you money.

AUSTRALIAN OWNED AUSTRALIAN MADE

When you buy ENVIRUS you get the best money can buy, the service only a local manufacturer can give and you support fellow hardworking Australians. We hand craft our Masks in our own Australian factory to the highest standard and use only the best materials available.

WILL THE EVERYDAY MASK STOP CORONAVIRUS?

It cannot be guaranteed that any mask will 100% stop the Coronavirus, however there is significant evidence that the wearing of masks in public can significantly reduce the risk of cross contamination and infection for any droplet spread virus. The materials that make up the EVERYDAY MASK are anti microbial and droplet resistant.

We have compiled a list of countries that have mandated or moved to recommend their citizens wear masks whenever in public to limit the risk of the virus spreading. This list is widely reported by respected media sources and references countries that have made these decisions since March 2020 as a direct result of the spread of the Corona Virus Global Pandemic.
